- Detailed Profitability Analysis
- More Accurate Stock Control
- EDI links to automate order processing
- Business Intelligence database
- Integration to **OneFit** or third party Accounting
- Integration with **LID** allows improved analysis
- Integration with E-Commerce (option)

Caterer

The integrated system for the catering Industry

OneFit Caterer is a specialised integrated computer system for fresh produce supplies to the catering industry. Based on practical procedures Caterer incorporates the latest technology to cater for the modern environment with 24/7 use.

More efficient order processing

Orders may be entered in the traditional manner, one line at a time but there are faster and more efficient methods of recording large orders :

•Repeat orders

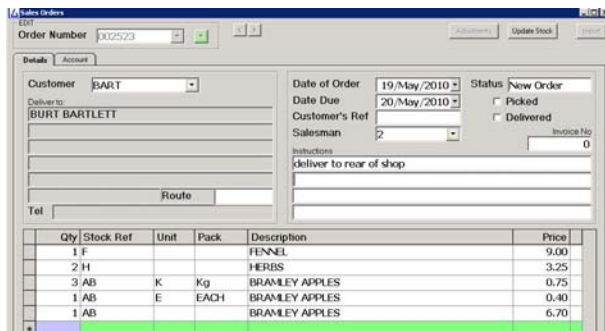

Regular orders can be entered and are automatically generated on the appropriate day. Different orders can be stored for each day of the week. Several orders can be stored for a single day – particularly useful for customers for example with regular dairy or bakery products but with variable fresh produce orders.

•Customer Favourites

Access customers favourite products and create an instant order.

•E-Commerce

Allow customers to enter their orders directly on the web – more accurate and no need to re-enter data.

Qty	Stock Ref	Unit	Pack	Description	Price
1	F			FENNEL	9.00
2	H			HERBS	3.25
3	AB	K	Kg	BRAMLEY APPLES	0.75
1	AB	E	EACH	BRAMLEY APPLES	0.40
1	AB			BRAMLEY APPLES	6.70
